offer a range of benefits:**

Enjoy a connected system without the need for indoor units.

Offer remote concierge services and SIP integration.

Manage users and access profiles remotely.

*Benefit from the advantages and innovations of integrated video door entry
and access control, with a state-of-the-art technological solution.*

A global and versatile solution, **suitable for any
type of property:**

Residential and Build-to-Rent

Offices, hotels and B&B-style accommodation

Sixty5 GCloud

6502 GCloud

6509 GCloud

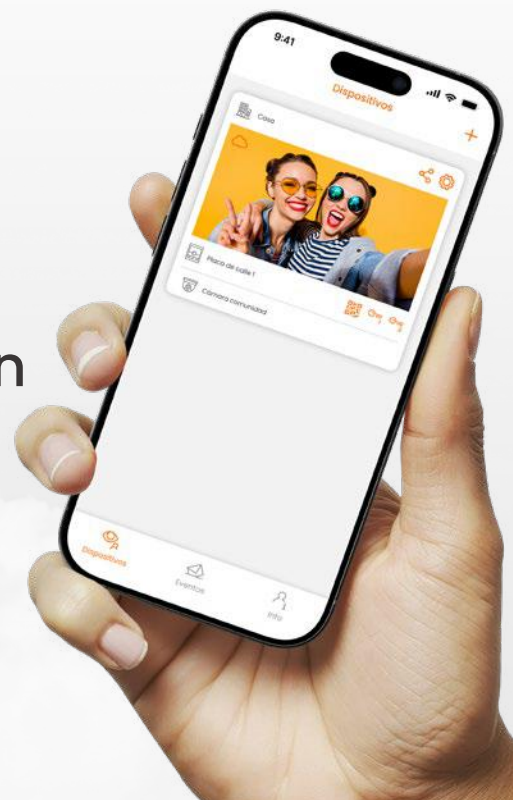

The Sixty5 GCloud connected panels offer a high **IP65 protection rating**, ensuring durability and robustness.

Flexible power supply via a standard 48V PoE port (802.3af) or 12V DC.

Developed using state-of-the-art technology, the Sixty5 series panels offer a smooth and modern user experience, thanks to their high-performance hardware, based on **Android 12**.

Take security and communication to the next level with Golmar!

limitless combination

Access control

Endless possibilities

Golmar GCloud's connected door panels offer resident and visitor access control management through different type of credentials:

Face recognition

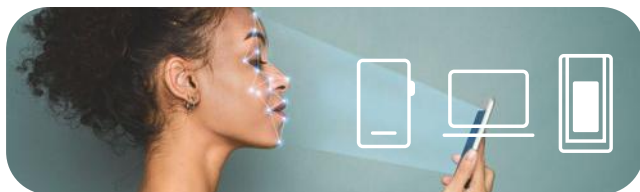

RFID

QR

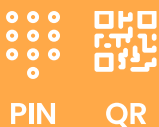

PIN

PIN and QR codes as face recognition access profiles, can be managed via the app, on the panel itself, or via the web management portal. RFID cards can also be remotely linked via the management platform.

Open the door and access with complete peace of mind; the Golmar GCloud connected solution will continue recognizing access credentials, even when there is no internet connection.

PIN QR

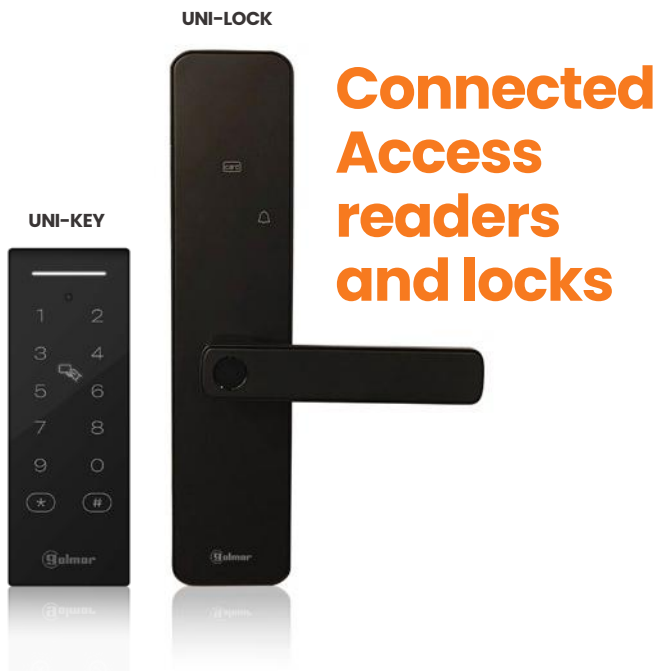

**easy
access
for
deliveries
and
visitors**

Set a validity
period or
number of uses

The 7-inch panel features a **dual camera** for access control via dynamic **3D face recognition**.

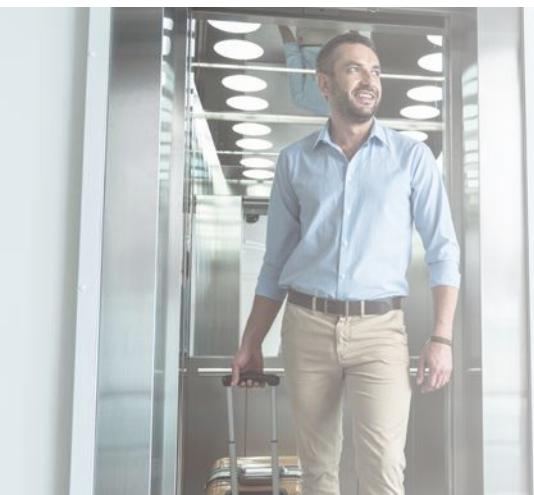

Connected Access readers and locks

UNI-KEY and UNI-LOCK are GCloud connected access devices. The GCloud access readers and smart locks are compatible with 13,56 Mhz MIFARE+ cards, as well as **virtual credentials such as PIN and QR codes.**

Improve the performance and management of the access within the complex, establish restricted areas to certain users, individual apartment access, or **create spaces such as gyms, swimming pools, or multi-purpose rooms,** accessible only during specified time schedules.

Lift control

Add an extra layer of security by integrating access control and lift management, using the LCU lift control relay modules and UNI-KEY readers.

ANPR – Automatic Number Plate Recognition camera

Manage vehicle access and number plate lists via the GCloud portal or through the Golmar remote service integrated in the camera.

receive calls from the panels and concierge
**from
anywhere.**

The freedom of an app.

The trust of an indoor unit.

edge

GCloud is a solution designed also for the youngest members of the family and elder people.

You can optionally add the **Edge GCloud monitor as an additional device**. Thanks to the connection options via PoE or a local 12V DC power supply, as well as its dual-band Wi-Fi technology (2.4GHz and 5GHz), you can choose to move the monitor freely around the home or set up a fixed installation point.

Advanced home automation features

Edge GCloud has been developed using technology based on the Android 12 platform, which will allow you to **use home automation apps and carry out integrations**.

EDGE G-CLOUD

Communication and

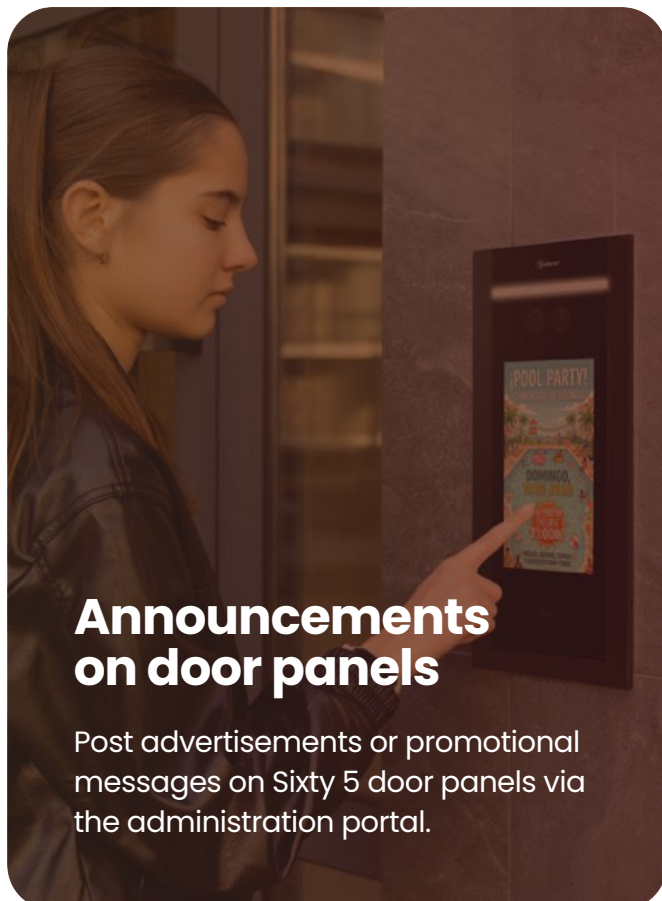

A direct channel
to meet every need

GCloud is a fully integrated management platform that connects residents, property managers and installers, offering users a personalised and convenient experience via the app, in real time and from anywhere.

Instant messaging service with the community

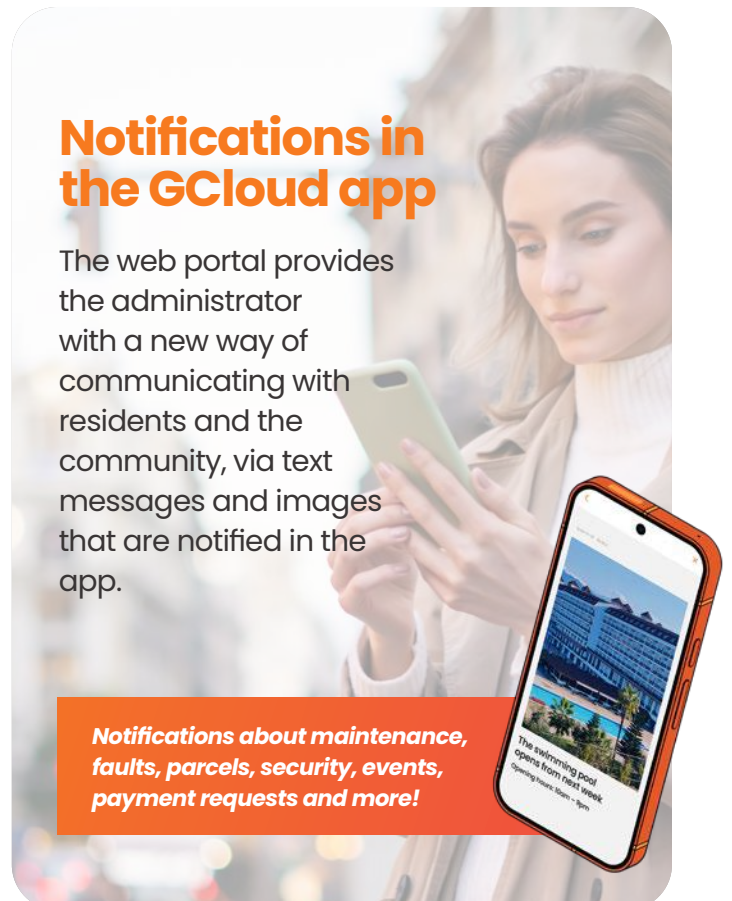

Establish a direct line of communication between the resident's Golmar GCloud app and the property manager's web portal, **via a chat function through which residents can report issues, make suggestions, or request assistance.**

The property manager can easily keep residents informed of the status and progress of any actions they have requested.

Announcements on door panels

Post advertisements or promotional messages on Sixty 5 door panels via the administration portal.

Notifications in the GCloud app

The web portal provides the administrator with a new way of communicating with residents and the community, via text messages and images that are notified in the app.

Notifications about maintenance, faults, parcels, security, events, payment requests and more!

and management

With the GCloud app, the concierge can receive and manage calls **from anywhere, even when they are not at their desk.** This ensures that support for residents and visitors continues without interruption, assuring a responsive service that is always available.

concierge unit

CE-1000 GCLOUD

Take the
concierge's
attention
beyond the
reception area.

From the GCloud concierge unit, you can **call residents, receive calls from the door panels or communicate with other concierge units.** Thanks to SIP protocol, you can establish a secure communication channel between the door panels and the concierge units without the need for an internet connection.

Advanced compre

cutting-edge and easy to integrate

Integrate cameras into your network via ONVIF, configure them remotely, and record video and audio from GCloud panels onto an NVR via the RTSP protocol.

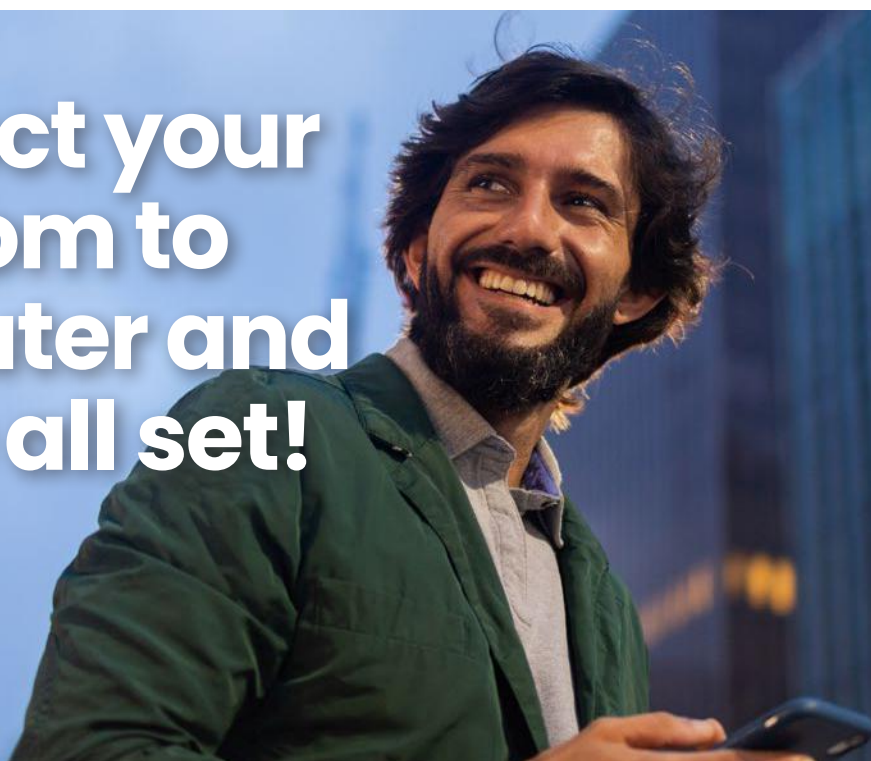

GCloud: Guarantee and complete peace of mind

All products in the GCloud system are certified in accordance with European data protection and cybersecurity directives, and are strictly compliant with NDAA regulations. Choosing GCloud means opting for **security, reliability and peace of mind for your projects.**

IP CCTV

Connect your intercom to the router and you're all set!

Comprehensive security

A system ready for any emergency

GCloud can be integrated with assistance devices, fire alarm, emergency and evacuation systems.

The GCloud SAR relay unit will enable you to set up a secure network which, **without relying on an internet connection**, can open doors in the event of a fire detection or an evacuation alarm being triggered.

It can also be integrated with assisted bathroom kits or other assistance devices, which will trigger priority alerts to the community's concierges.

With the SOS function, residents can make emergency calls via the concierge's app to receive assistance wherever they are.

Golmar makes it easy for you

Connect the panel to the internet via a local router, and the panel will automatically connect to the GCloud server.

Create a project, add the blocks, entrances and flats. Activate the apartments using GCloud licences.

Transfer the project to a property manager to handle resident registrations; residents will receive an email with a QR code to download and pair the GCloud app.

It's that simple!
